

Traction Device For Peyronies Disease

Why Traction Devices is a Approved Method of Peyronie's Correction:

1. Safe Non-invasive Solution to Peyronies Disease
2. Increases success with Combo Treatment (Injections/Cream/Surgery)
3. Proven Clinical Trials showing success of Application.

How it works to Cure Peyronie's Disease

The Extender focuses on traction. The device acts as a brace that extends the penis over a long period of time. The constant stretch forces the body to adapt. During the stretching, your body will be reacting to it. When it gets to the plaque, your body will naturally attack the plaque buildup and with the help of the device cause a painless and gradual breakup of the scarring.

“The scientific data gained from such research will benefit the quality of life and well being of millions of men who suffer from true organic genital condition such as Peyronie’s disease and post-operative fibrotic conditions.” (Wayne Helstrom, M.D F.A.C.S)
